Wenfeng Liang

Hangzhou, China | Founder & CEO, DeepSeek | Co-founder, High-Flyer Quant
deepseek.com | github.com/deepseek-ai

Summary

AI founder and quantitative systems builder focused on frontier LLMs, reasoning systems, and efficient training infrastructure. Founded DeepSeek in 2023; previously co-founded High-Flyer Quant, applying machine learning, large-scale data systems, and automated research pipelines to quantitative investment.

Experience

DeepSeek — Hangzhou, China
Founder and Chief Executive Officer — *2023 – Present*

- Set technical direction for open-weight LLMs, reasoning models, and cost-efficient training systems.
- Built teams across architecture, pretraining, reinforcement learning, evaluation, systems, and inference optimization.
- Led public model releases emphasizing practical deployment, open access, and transparent technical reporting.

High-Flyer Quant — Hangzhou, China
Co-founder and Quantitative Research Leader — *2015 – Present*

- Co-founded an AI-driven quantitative investment firm using statistical learning and large-scale feature engineering for systematic trading.
- Directed investment in compute infrastructure, automated research pipelines, and production model deployment.

Selected Technical Leadership

Open Large Language Model Development | *LLM pretraining, alignment, inference* — 2023 – Present

- Led open model releases designed for broad developer access, independent evaluation, and efficient deployment.

Reasoning Model Systems | *reinforcement learning, evaluation, scalable training* — 2024 – Present

- Coordinated data generation, reward design, distributed training, evaluation, and inference-time behavior.

AI Quant Research Infrastructure | *ML systems, data platforms, distributed compute* — 2015 – 2023

- Built research infrastructure for data ingestion, model training, experiment tracking, backtesting, and production deployment.

Selected Publications and Technical Reports

DeepSeek-V3 Technical Report | *DeepSeek-AI technical report* — 2024

- Co-authored technical report describing the DeepSeek-V3 model family, including model architecture, training pipeline, efficiency choices, and evaluation results.

Native Sparse Attention | *efficient long-context attention* — 2025

- Co-authored study on sparse attention mechanisms for improving efficiency when processing long-context model inputs.

Insights into DeepSeek-V3 | *scaling and hardware-software co-design* — 2025

- Co-authored technical analysis on scaling challenges, memory efficiency, inter-chip communication, and hardware-aware AI infrastructure design.

Education

Zhejiang University — Hangzhou, China
M.S. in Information and Communication Engineering — *Completed 2010*

Zhejiang University — Hangzhou, China
B.S. in Electronics and Communication Engineering — *Completed 2007*

Skills

Research Areas: large language models, reasoning models, reinforcement learning, quantitative modeling, statistical learning, model evaluation
Systems: distributed training, GPU clusters, data pipelines, model serving, experiment infrastructure, high-throughput inference
Leadership: research strategy, open-source model release, AI lab building, technical recruiting, cross-functional engineering management
